

Energy Management System (EnMS) requirements

Summary

Energy Management System (EnMS) requirements

At Churchill, we are certified to the ISO 50001 'Energy Management' standard, which means that we are committed to continuously reducing our energy consumption. We operate a company-wide energy management policy, which sets out our commitments and objectives to energy management. The policy can be accessed via our website <https://www.churchillservices.com/>

We are committed to ensuring that we manage our business activities in a way that minimises and, where possible, prevents energy consumption as much as reasonably practicable; that promotes energy efficiency measures and that continually improves our energy performance and drives innovation in our business operations.

How does this affect me?

Churchill aims to procure more energy efficient alternatives when buying products, goods, and services. All our supply partners and subcontractors (vendors) have an obligation to follow the requirements of our EnMS and the energy policy, as all activities carried out on behalf of Churchill impact our overall energy performance, either directly or indirectly. Equally, vendors have the possibility to contribute to the effectiveness of our EnMS and to assist us in achieving our objectives and energy targets and improving our energy performance.

This can be achieved by:

- Utilising energy efficient equipment
- Ensuring equipment is maintained in line with manufacturers' guidelines
- Ensuring equipment is switched off when not in use
- Driving sensibly and avoiding unnecessary journeys
- Switching off lights when not required
- Not blocking any heaters
- Working with suppliers who are aligned with our energy policy
- Communicating energy requirements and expectations to employees
- Ensuring that employees are competent to carry out the task
- Ensuring that all necessary industry standards are met
- Seeking to use new, innovative solutions
- Sharing any good practices or areas for improvement

Why is this important?

At Churchill we are committed to continuously improving our energy performance and moving towards net zero emissions. Businesses have both a legal and a moral obligation to preserve energy and to safeguard our environment for future generations. In the UK alone, businesses are wasting millions of pounds each year due to poor energy management. By supporting Churchill's commitment to improving energy performance, you can make a meaningful contribution to preserving energy and to reducing our impact on the environment.

Key Points

- Churchill has a certified ISO 50001 Energy Management System (EnMS), which require us to continuously reduce our energy consumption.
- Our Energy Management Policy can be found at the bottom of the the Churchill website landing page.
- All our supply partners and subcontractors (vendors) have an obligation to follow the requirements of our EnMS and the energy policy as all activities affect our energy performance, directly or indirectly.
- Our goal is to preserve energy and to safeguard our environment for future generations.
